

Modelling Low Default Portfolios

Overcoming data limitations and the importance of benchmarking

Prepared for: Actuarial Society of South Africa – Banking Seminar

Agenda

1. **Challenges and approaches for modelling low default portfolios**
2. **Benchmarking and use of external data**
3. **Improving statistical models with qualitative information**
4. **Summary and Q&A**

Moody's Analytics helps our global clients measure, understand, and mitigate risk – beyond ratings

MOODY'S

MOODY'S
INVESTORS SERVICE

Independent provider of credit rating opinions and related information for nearly 100 years.

MOODY'S
ANALYTICS

Leading provider of data, software, research related professional services for financial risk management.

1

Challenges and approaches for modelling low default portfolios

Challenges faced by institutions in modelling credit risk

Data limitations make it particularly harder for institutions to model certain portions of their portfolios, especially for Low Default Portfolios

The common limitations are:

- » Lack of historical information (financial statements and other inputs)
- » No consistency in the default definition/identification
- » Non relevance of historical information due to change in business practices or mergers
- » New portfolios

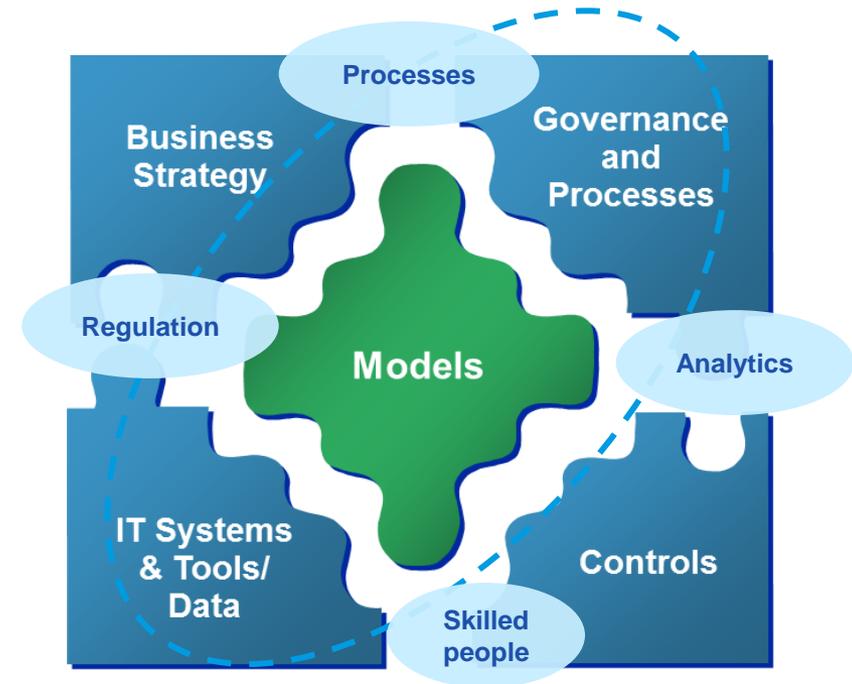

There is no consistently accepted definition of Low Default Portfolio

- » Generally includes Large Corporates, Banks, Sovereigns, Project Finance, Specialised Lending
- » Traditional tools need to be adapted in order to model this type of portfolios

Integration of models within the institution

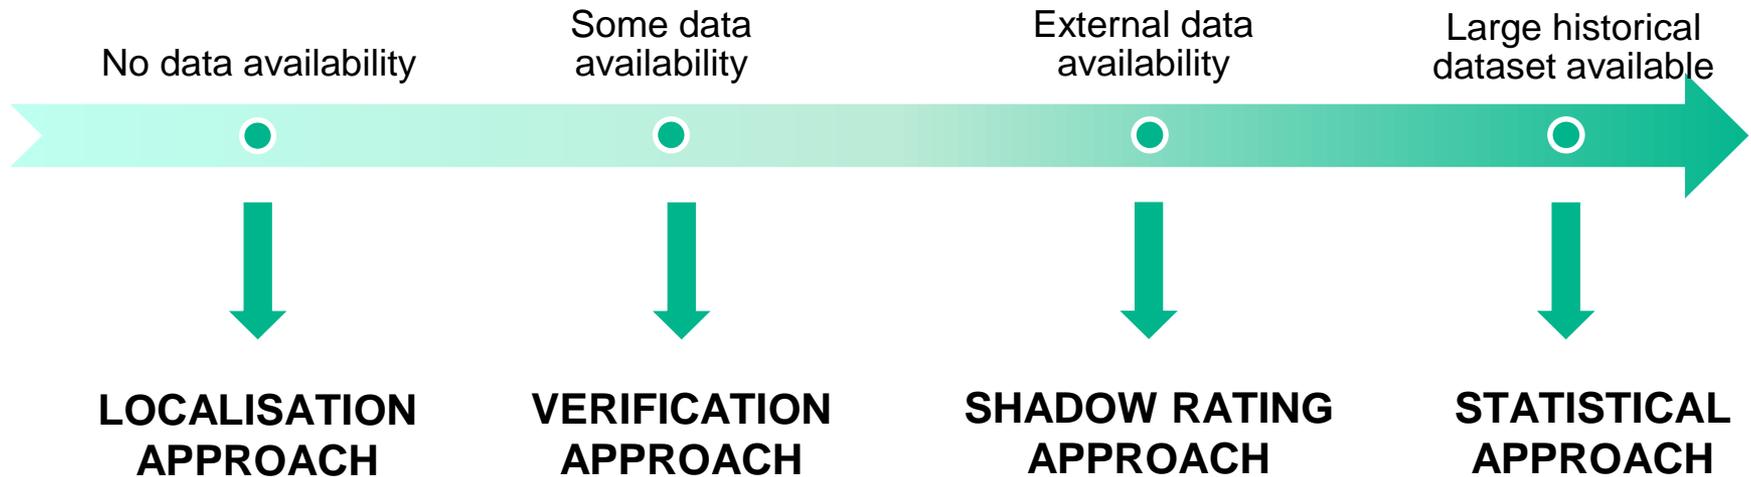

The modelling techniques need to fit the institution, both from an IT and user perspective, and the following points should be taken into account

- » Balance between the statistical sophistication and the data available
- » Models sophistication can grow through different generations
- » Inclusion of the Key Stakeholders (Risk, Credit, Business) in the modelling process
- » Transparency in the model calculation and final output that can be understood
- » Importance of capturing the day to day credit/risk assessment
- » Impact of the rating process, for example filling in the qualitative factors, in the model quality

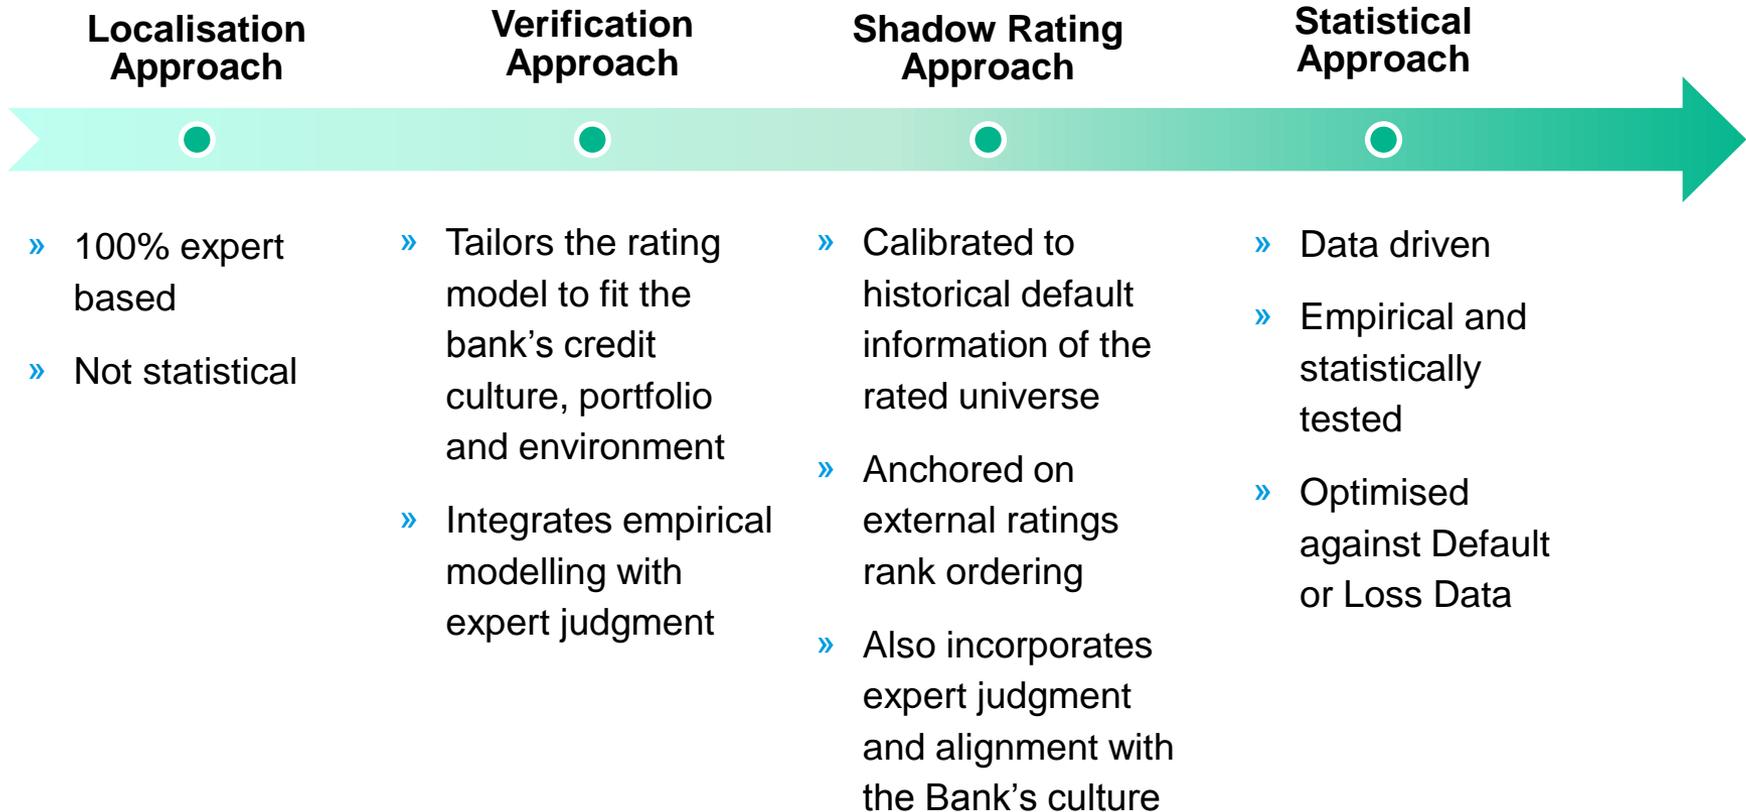

Moody's Analytics approach to modelling PD and LGD

The approach PD/LGD modelling approach depends on the amount of existing data in the organisation's respective portfolio:

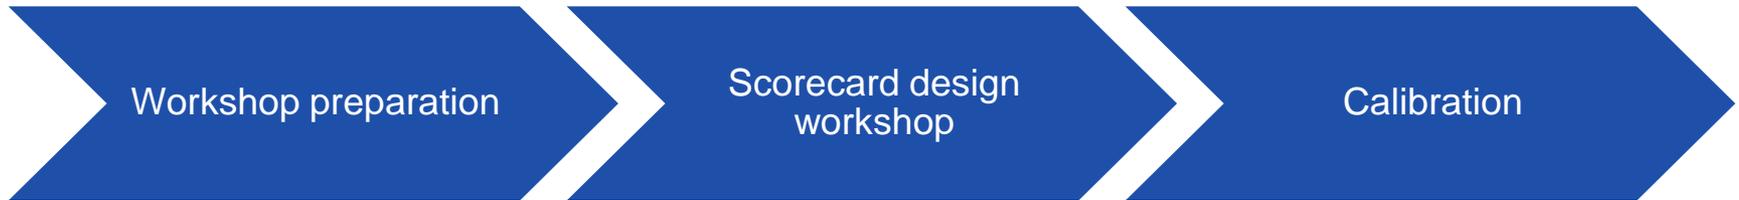

Modelling approach driven by data availability

Localisation Approach

Solution for reduced portfolios allowing for the incorporation of internal expertise

Designed to provide:

- » Transparent and objective risk assessment consistent with expert judgment
- » A consistent approach to assessing credit risk
- » A solution for small portfolios (less than 30 deals) and those with little or no default information

Model design workshop

One-day workshop where our team will work with experts from the institution to develop a rating model that is sufficiently complete and comprehensive for capturing data on existing customers

- » Design initial model based on the expertise and judgment of the client's credit professionals and Moody's
- » Leverage Moody's Investors Service rating methodologies for risk assessment techniques and factor selection
- » Moody's Analytics provide expertise on rating model design and feedback on the benefits and drawbacks of various approaches based on first-hand experience
- » The collaborative process ensures understanding of the institution's objectives, history and portfolio

Deliverable: A comprehensive report outlining the core methodology and results, and an Excel-based scorecard that the client can use in making credit decisions.

Verification Approach

Moody's Analytics alternative to the Statistical approach for low default portfolios

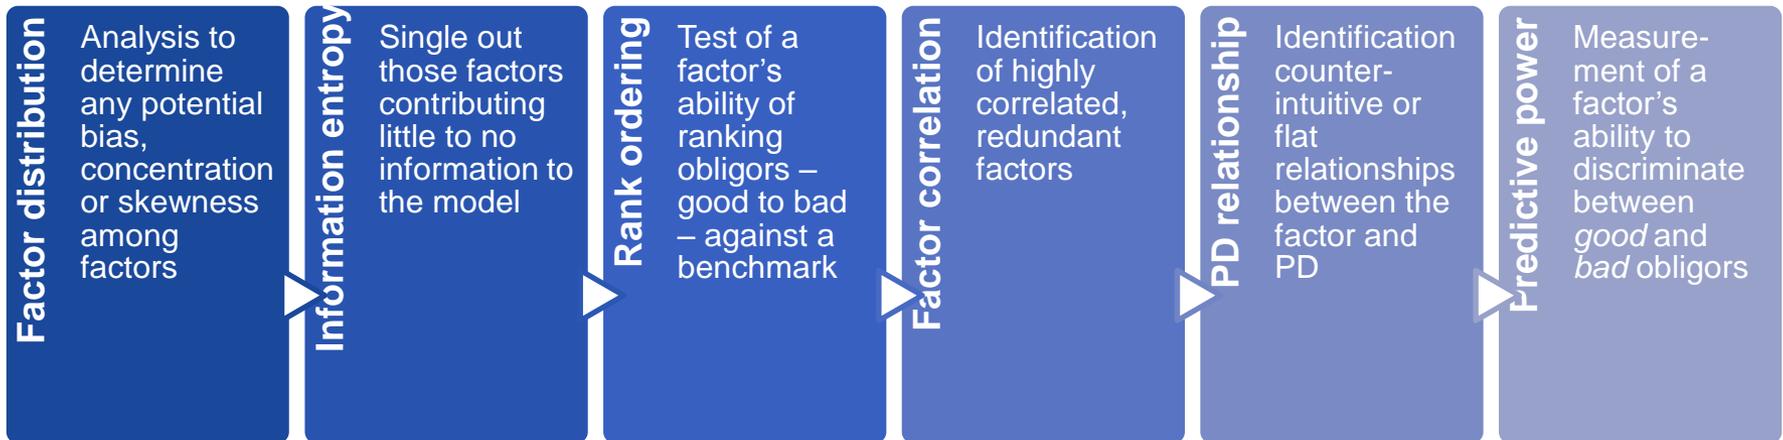

Designed to provide:

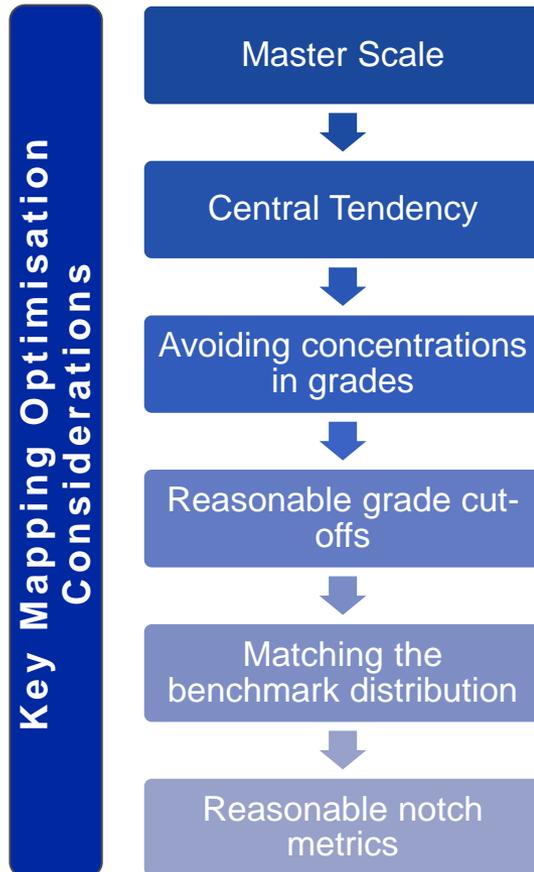

- » Transparent and objective risk assessment consistent with expert judgment
- » Model applicability to the given portfolio and asset class
- » Enhancement to the risk metrics and model discriminatory power
- » Transition to an empirically-derived and validated model

Single Factor Analysis

- » Evaluate each potential factor to determine its impact on the clarity and usability of the model

Mapping Optimisation

- » Mapping Optimisation is the process of mapping the scorecard model output (Score per client) to expert grades and associated PDs
- » This mapping process involves mathematical optimisation and manual adjustments that will ultimately minimise differences between the scorecard and the institution expert judgement-based ratings while ensuring a scorecard average PD equal to the Central Default Tendency

2

Benchmarking and use of external data

The rationale for benchmarking

The need for Benchmarking:

- » **Regulatory driven:** Regulation asks that financial institutions conduct benchmark analysis as part of their annual validation processes against a “Challenger Model”
- » **Lack of data:** For Low Default Portfolios, it is specially important for an institution to demonstrate the conservativeness of its calibration
- » **Best practices:** The need to compare and know the best practices in the market
- » **Wider data:** Models built internally might not be able to capture behaviours in case a institution expands to different segments or lowers its the lending criteria

**All these aspects refer to one very important risk dimension: Model Risk.
Model Risk has important implications on both Pillar I and Pillar II.**

Benchmarking low default portfolios

» Proprietary databases

- CRD/DRD
- Structured Finance Data
- Project Finance Consortium
- External Ratings

**Proprietary
Databases**

» Off-the-shelf models

- CreditEdge / RiskCalc
- LossCalc / PF LGD Model

Models

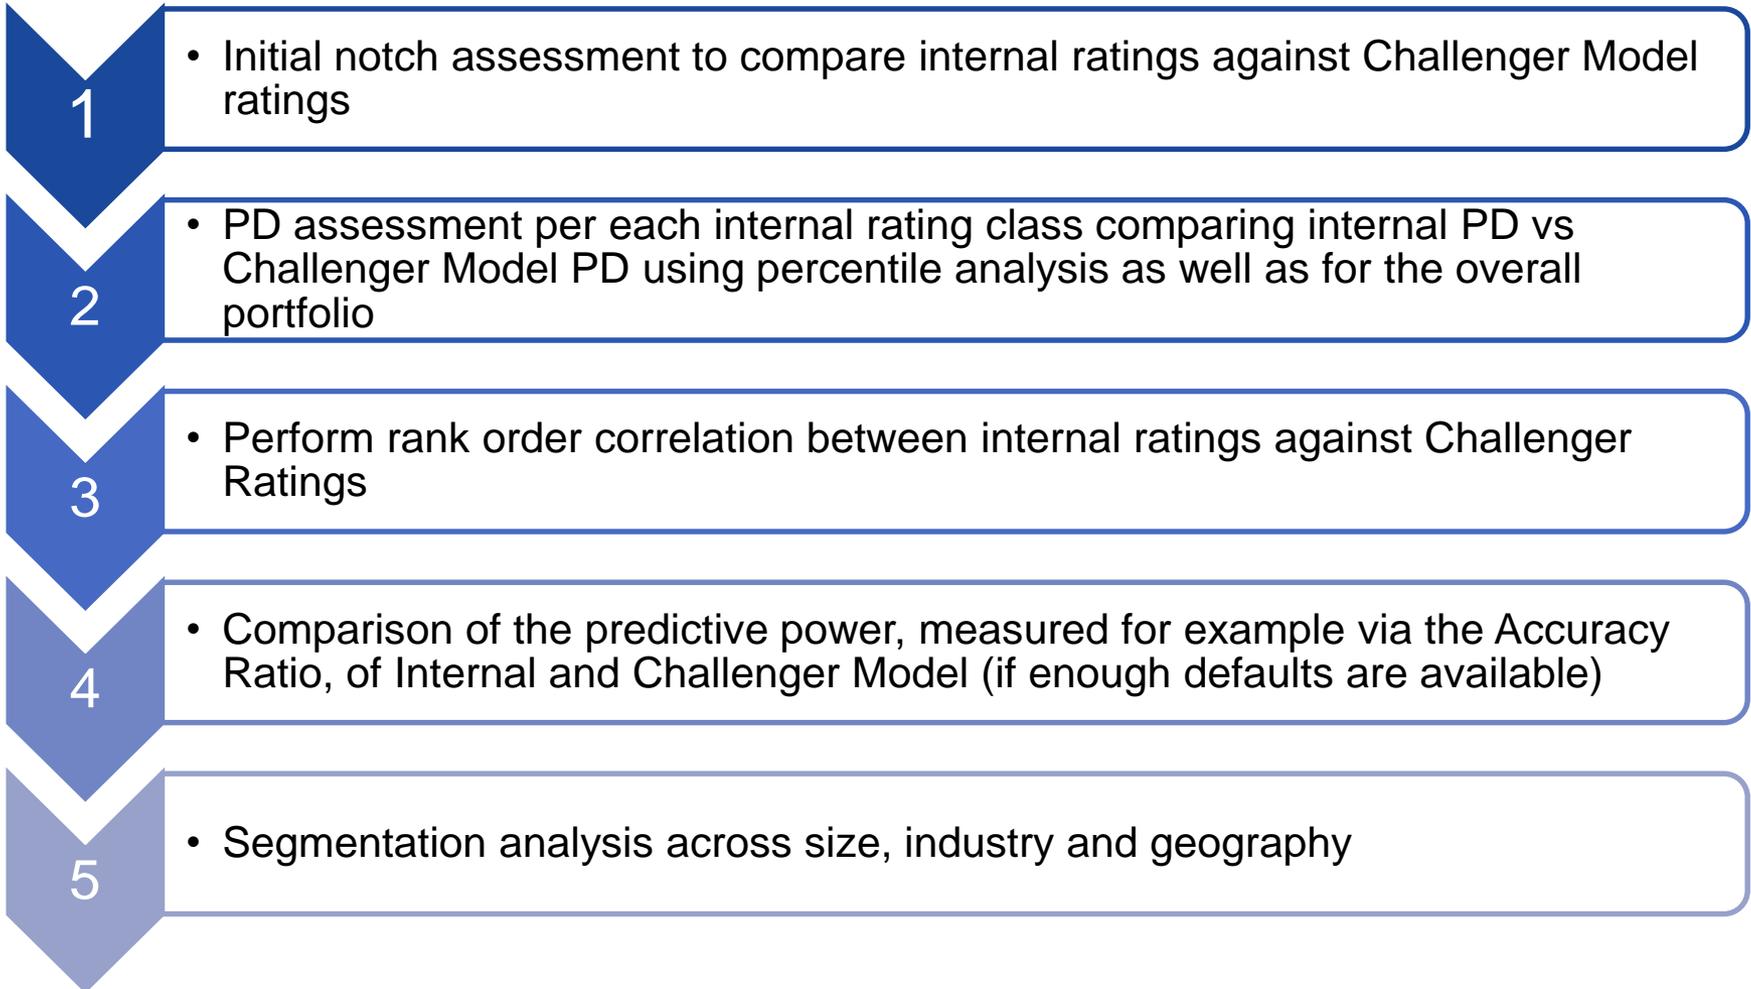

» Model design benchmarking

- Model Design
- Risk Driver Comprehensiveness
- Calibration

Model Review

Example of PD benchmarking

Notch Assessment

Benchmark internal ratings against Challenger Model implied ratings

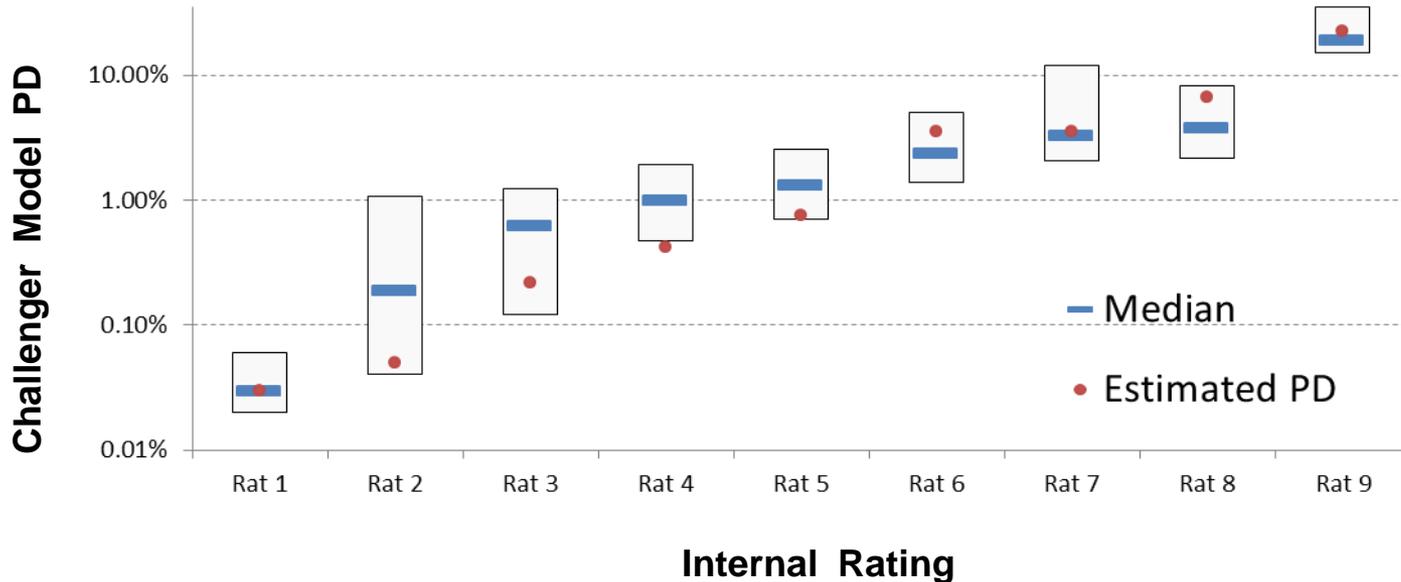

Obligor Type	Rating Type	Exact Match	Within +1/-1 Grade	Within +2/-2 Grade	Greater than 2 Notch Diff	Within 2 Notches
Public	PIT	x%	x%	x%	x%	x%
	TTC	x%	x%	x%	x%	x%
Private	PIT	x%	x%	x%	x%	x%
	TTC	x%	x%	x%	x%	x%

» Main outcome:

- Conclude if internal ratings have a better alignment with TTC or PIT measures
- Conclude the degree of alignment between internal and challenger model

Percentile Analysis

Default risk assessment against Challenger Model to be performed in each of the rating classes using percentile analysis

» Main outcomes:

- Identify the dispersion of Challenger PD per each internal rating class
- Conclude if internal model comprises enough conservatism when compared against challenger model

Rank Order Correlation

Perform rank order correlation between internal ratings against Challenger implied ratings

» Measures: (1) Pearson (2) Spearman's Rho (3) Kendall's Tau correlation

Correlation coefficients buckets (absolute value)	Evaluation	Interpretation
[0 , X1 [weak	Internal and challenger ratings/PDs have a weak association
[X1 , X2 [medium	Internal and challenger ratings/PDs have a medium association
[X2 , X3]	high	Internal and challenger ratings/PDs have a high association

» Main outcomes:

- Evaluate the degree of association between internal and challenger ratings
- This analysis can be done for ratings before and after overrides

Predictive Power

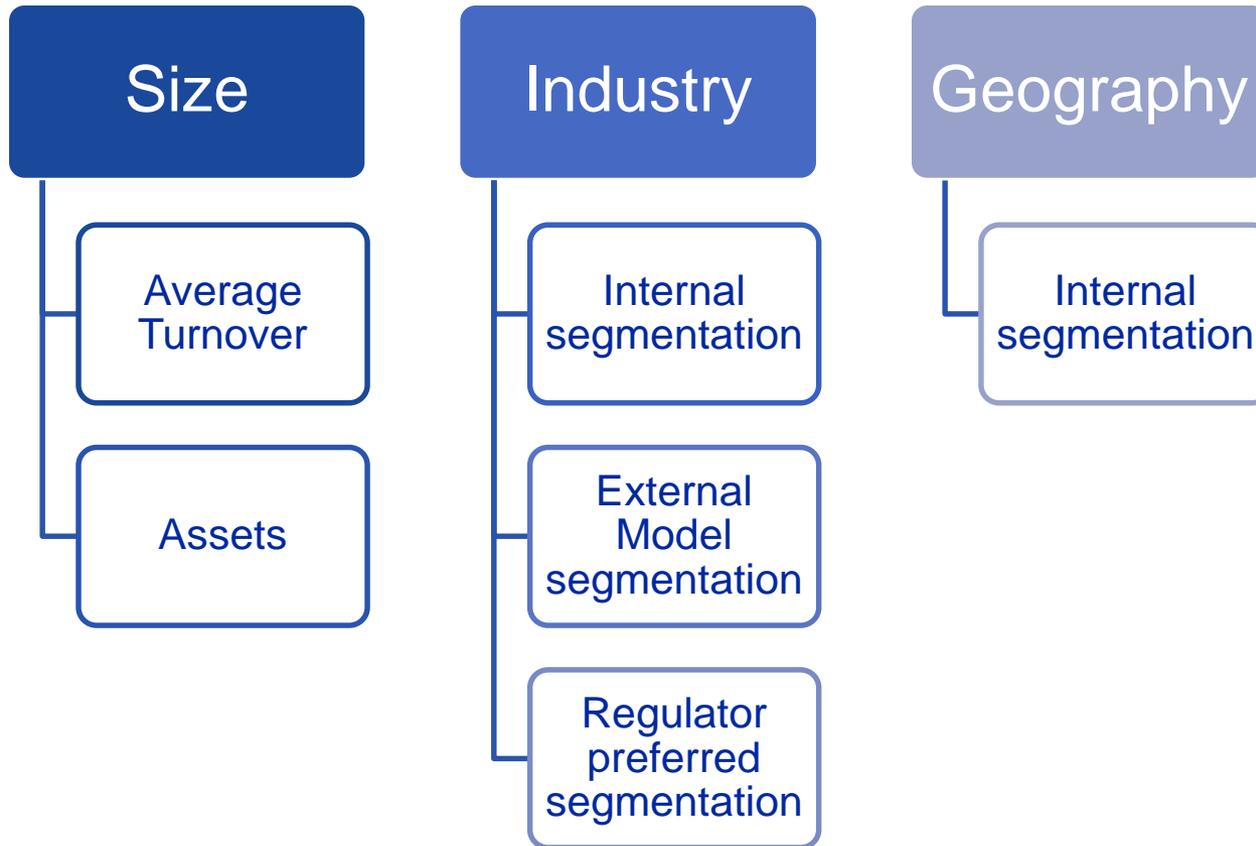

Compare Accuracy Ratio of the Two Models

Accuracy Ratio (Internal Vs Challenger)	Evaluation	Interpretation
$< X1$	Underperform	The Internal model is underperforming versus the Challenger Model
$[X1 , X2]$	In line	The predictive power of the two models are aligned
$> X2$	Outperform	The Internal model is outperforming versus the Challenger Model

» Main outcomes:

- Evaluate the predictive power of the two models
- Threshold values to define if a model is underperforming

Segmentation Analysis

Moody's Project Finance Consortium is leading efforts to collect project finance data

» Includes 5,880 projects representing 62% of all project finance transactions originated worldwide over a 30+ year period Jan 1983 to Dec 2014

» Includes 425 defaulted projects, based on Basel II criteria

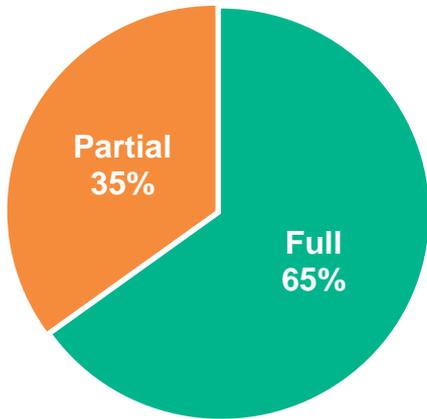

Ultimate Recoveries	226
Distressed Sales	40
Defaults in Work Out	159

» The database has been used to develop a statistically driven LGD model and can be used for the calibration of PD models. Future collection of financial information will support the development of data driven PD models.

» MIS has published a research piece summarizing the default and recovery findings: Project Finance Bank Loan Default & Recovery Study 1983-2014

Moody's Project Finance Consortium – Recoveries

Ultimate recovery

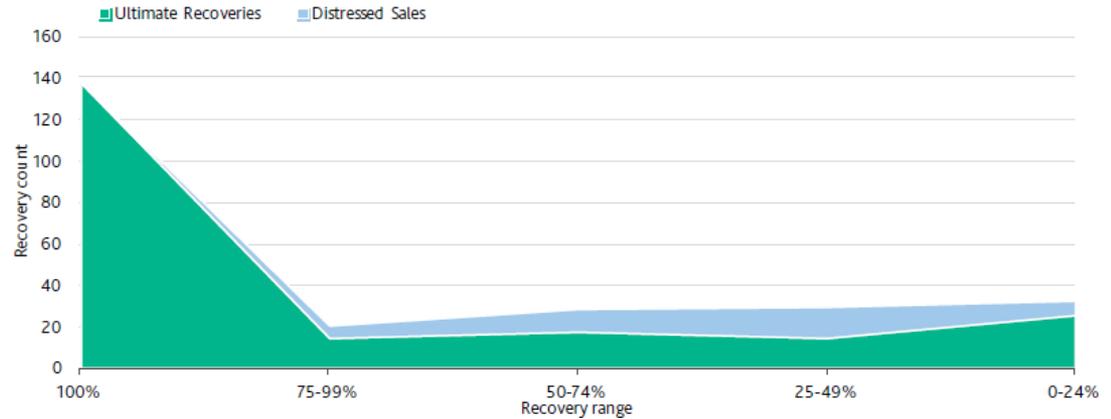

Average recovery rate for Ultimate Recovery: **80.3%**

Distressed sale

EXHIBIT 25

Distribution of Recovery Rates (BII)

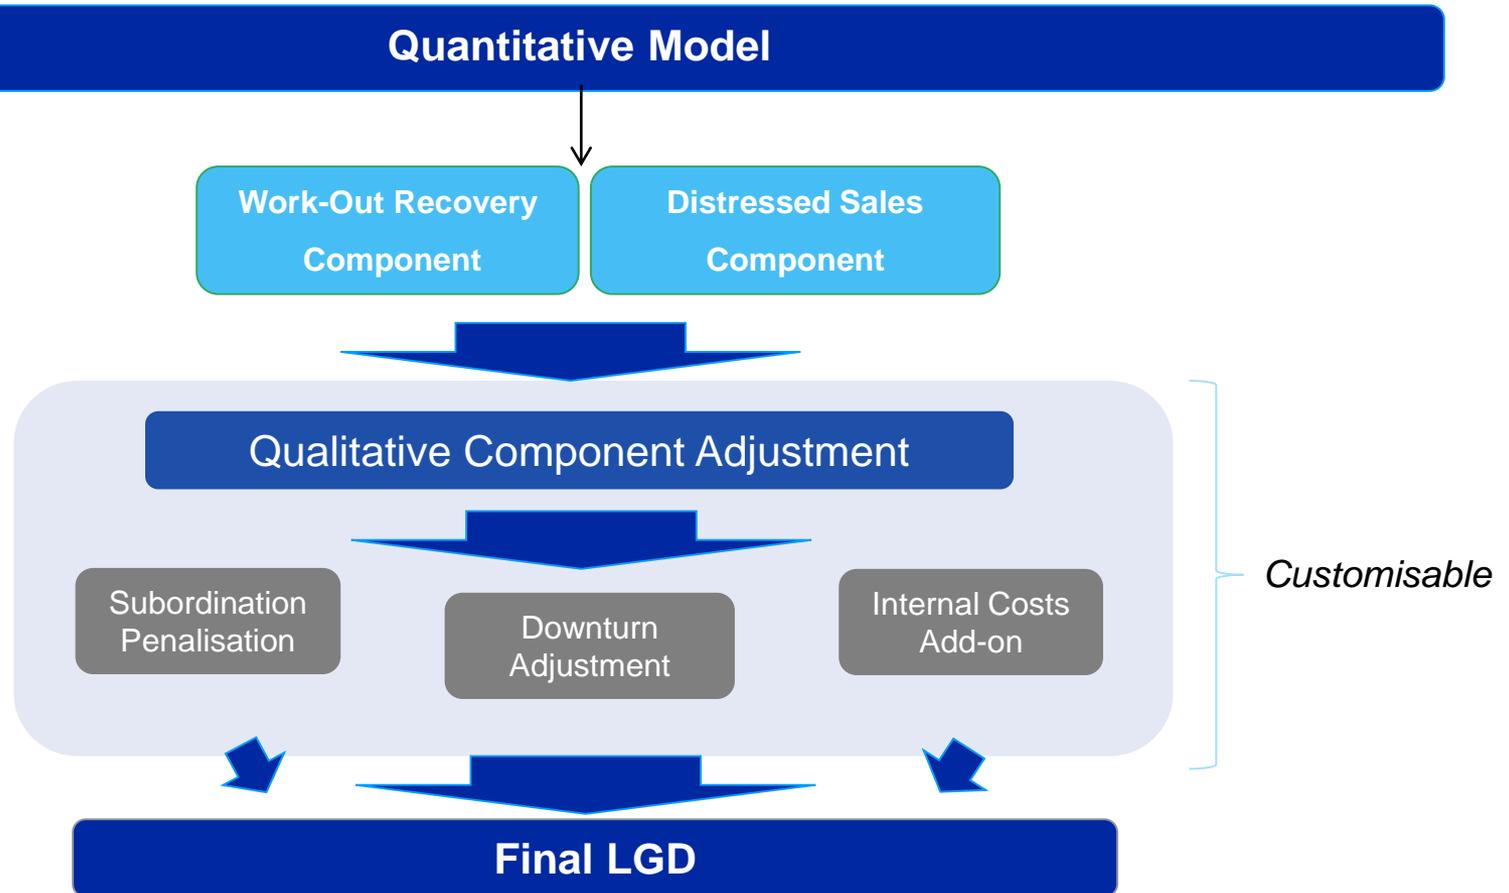

Average recovery rate for distressed sale: **50.3%**

3

Improving statistical models with qualitative information

LGD model: conceptual overview

- » The Off-The-Shelf MA LGD model has the following components

Integration of quantitative and qualitative components

A statistical LGD solution that could be validated for regulatory purposes

» Quantitative Component

- Estimates the expected level of losses based on intuitive regression modeling
- Addition of a distressed sales component ensuring that lower recovery impacts the final LGD. This effect has a regional differentiation.

» Qualitative Component

- Adds granularity to the model by including the factors which were not available in the database, as for example: Technology Risk, Legal Framework, Strategic Importance. The factor performance was tested in a sample of 50 deals from the MIS-rated PF Universe.

» Calibration

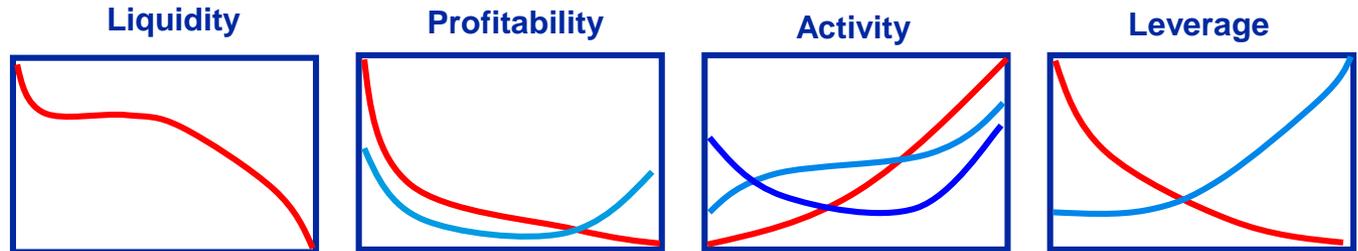

- Qualitative component was calibrated on the same 50 sample deals, thus ensuring the average LGD is still aligned with the consortium loss data

» Add-Ons

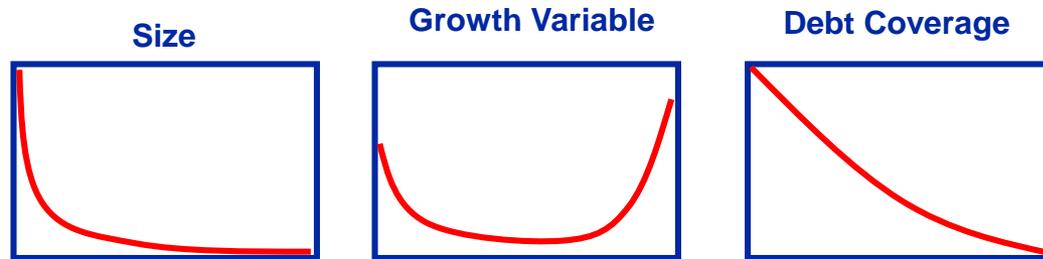

- Conservative LGD downturn; depending on regulatory requirements. Also accounts for internal costs of recovery

Statistical model for Large Corporates: Identifying the relevant ratios to estimate default risk

We first identify broad categories of ratios relevant to default.

We evaluate as many ratios per risk factor as possible

- » Within each category, we then choose a limited number of ratios which have:
 - High predictive power
 - Data availability
 - Intuitive behavior

Adjusting a statistical model with qualitative factors – Example of a Bank PD model

OPERATING ENVIRONMENT

- Regulatory Environment
- Financial Market Development
- Banking System Outlook

COMPANY PROFILE

- Business and geographical Diversification
- Credit Concentration
- Competitive Position
- Subjectivity to Market Risk

COMPANY BEHAVIOUR

- Management structure & governance
- Risk, Liquidity Management and Appetite
- Financial Reporting Transparency and Credit History

3

Summary and Q&A

Summary

- » Data limitations restrict options for modelling low default portfolios
- » The integration of a model into an institution day to day practice can unlock value
- » Alternative approaches can be employed to overcome these challenges
- » The use of external data in order to complement the internal data is key, especially for low default portfolios
- » Challenger models enable institutions to constantly benchmark internal models and identify areas of possible improvement
- » Leveraging a statistical model and adjusting it with a qualitative overlay can reconcile expert driven views with validation requirements

CREDIT RATINGS ISSUED BY MOODY'S INVESTORS SERVICE, INC. AND ITS RATINGS AFFILIATES ("MIS") ARE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND CREDIT RATINGS AND RESEARCH PUBLICATIONS PUBLISHED BY MOODY'S ("MOODY'S PUBLICATIONS") MAY INCLUDE MOODY'S CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL, FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS AND MOODY'S OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. CREDIT RATINGS AND MOODY'S PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. NEITHER CREDIT RATINGS NOR MOODY'S PUBLICATIONS COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS AND PUBLISHES MOODY'S PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS AND MOODY'S PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS OR MOODY'S PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing the Moody's Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY SUCH RATING OR OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any rating, agreed to pay to Moody's Investors Service, Inc. for appraisal and rating services rendered by it fees ranging from \$1,500 to approximately \$2,500,000. MCO and MIS also maintain policies and procedures to address the independence of MIS's ratings and rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold ratings from MIS and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moody's.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001.

MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors. It would be reckless and inappropriate for retail investors to use MOODY'S credit ratings or publications when making an investment decision. If in doubt you should contact your financial or other professional adviser.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any rating, agreed to pay to MJKK or MSFJ (as applicable) for appraisal and rating services rendered by it fees ranging from JPY200,000 to approximately JPY350,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.
